

## PRODUCT INFO

# V-TYPE INTERIOR BARS

## DESCRIPTION

The Dogyu V-Shaped Interior Bar is an excellent tool designed with professionals in mind. It is drop-forged and tempered with steel for maximum strength and durability, making it a great necessity for interior construction. This tool is incredibly versatile and serves as a nail puller, prying tool, hammer, and scraper all in one. It features two different end heads - a 90° angle claw end and a V-shaped curved tail end, both of which are great for removing nails. The solid flat surface at the back of the claw head can be used as a hammer to pound nails, while the curved flared tail end acts as a scraper and wedge, making it especially useful for prying into seams and joints and for removing base trim with minimal damage. The rounded head on the nail puller also helps to improve leverage. Its size is perfect for fitting into your tool bag. This smart tool is designed to decrease the number of tools needed to get the job done, making the work faster and the load lighter. Plus, it's made in Japan, ensuring its quality and reliability.

### DGMP150
