

PRODUCT INFO

MORTICE & MARKING GAUGE

FP1876

DESCRIPTION

The Footprint Mortice and Marking Gauge is a versatile tool that combines the functionality of both a marking gauge and a mortice gauge. On one side, it features a pin that is used to mark a parallel line to an edge, while on the other side, there is an adjustable double pin that is used to mark out a mortice and tenon joint. The pins are made from hardened steel, which provides a long working life and makes the gauge suitable for use on various types of wood. The solid brass slide adjuster for the mortice marking pins ensures precision control over the markings. The head and stem of the gauge are made from hard-wearing beechwood, adding to the tool's durability. The Footprint Mortice and Marking Gauge also features an easy twist plastic screw adjuster, which allows for quick and effortless adjustments. Overall, this tool is an excellent investment for woodworkers looking to streamline their tool collection and improve their accuracy in marking out joints. Made in Sheffield, Britain.
