LONG NOSE LOCKING PLIER

127 SERIES

DESCRIPTION

The Grip-On Series 127 Long Nose Locking Plier is an essential tool that provides great assistance when holding, placing or extracting pieces in awkward areas such as engines. Its long slim jaw design enables the pliers to reach deep into recessed areas while the curved section allows it to hold rounded objects. The adjustable jaw opening makes it suitable for various tasks. Its ergonomic design offers comfortable handling, and the no pinch easy release feature ensures safety. The concave profile of the pliers provides better push-pull action, making it an ideal tool for a wide range of tasks. The superior quality of the forged steel jaws ensures durability, and the epoxy paint coating on the handle is 20x more corrosion-resistant than nickel. Available in two sizes: 175mm & 230mm.

GO127-06
