

PRODUCT INFO

DRAIN CLEANING BLADDER DK750

DESCRIPTION

The Drain King 750 is a highly efficient and effective water-powered drain cleaner that has become the top choice of plumbers for cleaning out drains, sewers, basements, and main drains. As the original water-powered drain cleaner to ever enter the market, Drain King features a patented dispersing valve that makes it the first and only water-powered drain unclogger of its kind. The water-powered mechanism expands the Drain King from 3 to 6 inches, sealing the pipe, while water pulsating jets clear the clogged drain quickly up to 1000 feet. The best part is, Drain King operates and inflates with standard house water pressure of 40psi-80psi, ensuring that there is no danger of cracking your water pipes. Plus, with its automatic lock-in-valve, the unit locks in place, preventing it from sliding out of the pipe when in use. Drain King is proudly made in the USA and comes with a 1-year warranty.
