

PRODUCT INFO

LINE/CORNER BLOCKS

FP624-36

DESCRIPTION

Footprint Line/Corner Blocks are a must-have tool for bricklayers. These blocks are specially designed to ensure that courses of bricks are straight and true. The blocks have a window that allows bricklayers to see gauge markings on a profile and check whether the line is snagged. They also have narrow channels that hold the line tight, ensuring precision in the bricklaying process. Even when wearing gloves, the blocks are easy to grip, making them perfect for outdoor construction sites. With 50mm internal sides, the blocks can be used to fix 50mm box section profiles. These blocks come in a pack of 36, presented in a boxed display. All Footprint Line/Corner Blocks are made in Britain, emphasizing the brand's commitment to quality and local production.
