

## PRODUCT INFO

# 4LB FIBREGLASS HANDLE CLUB HAMMER

FP119-4LB

## DESCRIPTION

The Footprint Fibreglass Handle Club Hammer is a product that is truly unique and designed with precision. The handle was designed when our club hammers used in our forge needed replacing. The replacements we got did not give us the grip we needed when striking keys to hold forging dies in place, so we decided to design our own handle. This led to the development of a solid fibreglass core handle with a thick rubberised grip that ensures superior comfort when striking objects. Additionally, the hammer features a forged, hardened and tempered carbon steel head for maximum durability, and a large safety loop that allows for easy tethering when operating at height. Proudly made in Sheffield, Britain.

## FEATURES

- Forged, hardened and tempered carbon steel head.
- Solid fibreglass core handle.
- Rubberised grip for superior control and shock absorption.
- Extra thick handle for comfort and firm grip.
- Safety loop for tethering at height.
- Made in Sheffield, Britain.
