GUARDED MASONS CHISEL

FP1235

DESCRIPTION

The Footprint Masons Stone Chisel is a reliable tool that is widely used for various stone shaping and finishing tasks. It is specifically designed to smooth out the rippled surface left by scotching, which is also known as an “edging-in chisel”, or for splitting blocks. The chisel’s fully forged head to blade construction adds extra strength and durability, while its extra thickness provides superior robustness. The blade is hardened and tempered, which makes it last longer, reducing the need for frequent replacements. Its domed head is also designed to delay splintering and mushrooming from prolonged striking with a hammer. Additionally, the high visibility strong protective plastic moulded grip provides added safety during use. Proudly made in Sheffield, Britain, the Footprint Masons Stone Chisel is a top-quality tool that delivers reliable performance and is built to last.

FEATURES

- To smooth out rippled surfaces left by scotching.
- Fully forged from head to blade for extra strength.
- Extra thick blade for superior robustness.
- The blade is hardened and tempered for a longer lifespan.
- The high visibility strong protective plastic moulded grip adds safety during use.
- Made in Sheffield, Britain.
