CURVED JAW LOCKING PLIER

111 SERIES

DESCRIPTION

The Grip-On Series 111 Curved Jaw Locking Pliers are a general-purpose tool that is perfect for use in various settings, such as around the house, on the car, in the garage, workshop or factory. These easy-to-release locking pliers have a great capacity for holding all kinds of round shapes, thanks to their narrow large opening curved shaped jaws. The jaws are also adjustable, allowing for a precise fit and better control. The ergonomic design ensures comfortable handling with no pinch and easy release. Moreover, the pliers feature a concave profile for better push-pull, making them even more versatile. The jaws are made from forged steel, ensuring superior quality. The handle of the pliers is coated with epoxy paint, which gives them a remarkable level of corrosion resistance that is 20 times greater than that of nickel, contributing to their durability and longevity. Available in two sizes: 190mm & 240mm.
