

# StealthMounts®

## Magnetic Bit Holders

PROUDLY MADE IN THE UNITED KINGDOM

### How to use

The StealthMounts Magnetic Bit Holder is a convenient and compact way to carry the hex bits that you need for your tools, right where you need them. Mount the Magnetic Bit Holder on compatible tools using the supplied fixing screw. The Bit Holder works better when the magnet is facing outwards, but maybe mounted from the reverse if required. Some tools may not be compatible with the Magnetic Bit Holder, due to their shape, size or lack of available moulding thread.

### Precautions

Do not over-tighten fixings. Check product integrity prior to use and do not use if damaged. Harsh environments may reduce strength of Magnetic Bit Holder. Holder does not guarantee safe or compliant storage of bits or other hardware, local regulations must be observed where applicable. Do not apply excessive force to product and use only where failure (such as broken or separating elements, bits or other hardware falling out) cannot cause harm or damage if holder or contents fall. Do not use at height. Do not force Magnetic Bit Holder onto a tool. Magnet is held in place by force fit (friction) and should not be removed intentionally as this may lead to it becoming loose, glue may be required to retain it if refitted.
