INFLATABLE TEST PLUG

MM1291-150

DESCRIPTION

The Bailey Inflatable Test Plugs are perfectly designed for sealing and blocking off pipes for repair work while redirecting and regulating the in and outflow downstream when necessary. This plug is fitted with peripheral ribs that will give a better air-tight seal and grip on the pipe being repaired or replaced. It also features a long 1.2m hose that is fitted with a Schrader valve to quickly release the pressure. These plugs are similar in use to canvas or nylon-covered bags. They have the additional advantages of being more robust; easy to keep clean; seal across a wider tolerance band and will achieve a good seal in all types of pipe very easily and quickly. Easily inflated with a hand pump. Ideal for use in areas where access is smaller than the test diameter.

FEATURES

- For sealing and blocking off pipes.
- Fitted with a Schrader valve to quickly release the pressure.
- Easily inflated with a hand pump.
- Very flexible and can fit in tight spaces.
- Peripheral ribs give a better seal and grip.
