CARPENTERS SLIDING BEVEL

FP1254-225

DESCRIPTION

The Footprint sliding bevel, also known as T Bevel, is a crucial tool for any woodworker. It is commonly used for checking angles, marking joints or marking across boards. The sliding bevel is constructed with a chemically blued blade that protects against corrosion, ensuring long-term use. Additionally, the tool features a brass wing nut, which makes adjustment easy and straightforward. The sliding bevel is made with Beechwood, a less expensive and slightly lighter wearing alternative to Walnut. This makes it an ideal material for beginners or those looking for an economical option. All of these features make the Footprint sliding bevel an indispensable tool for anyone working with wood. Proudly made in Sheffield, Britain.
