

PRODUCT INFO

MASTER PLUNGER

DKMP500

DESCRIPTION

The Master Plunger 500 series is a versatile plunger that can tackle any clogging job with its large bellows providing 8 cups of water displacement. The plunger is made from high-quality material in the USA, which allows it to conform to a 90-degree bend. It has a tri-level nose that fits tightly on standard and high-efficiency toilets, kitchen sink drains, and disposal drains. The plunger also features an air relief slot that releases air through the handle, preventing water overflow. This feature makes it possible to submerge the plunger into a toilet with a high water level without any water spilling over onto the floor. The Master Plunger is manufactured using the highest quality resins and blow-molding techniques and comes with a 1-year warranty. Additionally, it is more sanitary than standard plungers, as it is made from high-quality plastic that is smooth and can be easily rinsed clean, unlike traditional rubber plungers that harbor bacteria in their pores. The world's only 3 in 1 plunger!

FEATURES

- Large bellows for powerful unclogging (8 cups displacement).
- Conforms to a 90-degree bend.
- Tri-level nose for tight fit on various drains.
- Air relief slot to prevent water overflow.
- Manufactured with high-quality materials and techniques.
- 1-year warranty.
- More sanitary than standard rubber plungers.
- World's only 3 in 1 plunger.
