ADJUSTABLE COUNTERSINK/BORE SM14 SERIES

DESCRIPTION

The STAR-M Adjustable Countersink / Bore is a versatile tool that streamlines wood preparation for threads and screw heads in a single operation. With its tapered tips, it ensures a snug fit for classic screws, while the pilot bits' fast pitch design makes quick work of wood. The flute countersink bodies create clean, sharp holes, and the adjustable stop collar permits precise screw head placement, flush with the surface. Crafted from high carbon steel for durability, this tool is best used with electric power drills and cordless drills over 14.4 volts, making it an essential choice for woodworking projects that demand precision and efficiency. Allen key included.
